DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/12/03 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 12, 15 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Phillips et al (US 6,019,072) in view of Toulouse (US 6,217,085).

Phillips discloses the invention substantially as claimed including a tool 1, housing 140, fuel cell 77, non circular regulator 82 with shuttle valve 61, functioning as an adapter and adapted to be in fluid communication with the fuel cell and accommodated onto the housing, biased latch 76, biased by spring bracket 65, which is equipped with tangs for release of regulator from the fuel cell (see Fig. 7, 9, 18 and C4, L40-65). What Phillips does not disclose is an adapter that is non-removably attached

and is adapted to shear upon attempted removal. However, Toulouse teaches that it is old and well known in the art of fuel cell connections to provide an adapter 1, that is non-removably mounted onto fuel cell 20, through the use of legs 5 and 6, and is configured to undergo sheer failure (i.e. the legs will deform inward upon application of a shear force) upon rotational movement from the fuel cell for the purpose of providing a readily disposable cost efficient adapter (see Figs.1,2,6 and C3, L23-48). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the invention of Phillips with the non-removable adapter as taught by Toulouse for the purpose of providing a readily disposable cost efficient adapter.

Allowable Subject Matter

4. Claims 21 and 22 allowed.
5. Claims 13,14,16-19 and 23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

6. Applicant's arguments with respect to claims 12 have been considered but are moot in view of the new ground(s) of rejection.
